

# Hand-Laid Footway Microsurfacing

## The Need

Colas were approached by Ringway in Worcestershire to carry out footway Microsurfacing works on a number of footpaths throughout the county.

## Our Approach

Sites were chosen in key locations where conventional resurfacing would have been costly and unnecessary, but the footways still required rejuvenating in order to prevent further deterioration.

Bitutex FP was the material of choice due to its low cost and high performance.

The material is hand laid by a team of specially trained operatives, and when cured it not only seals water out preventing further deterioration, it also fills minor irregularities and provides a new and attractive finish to the footways.

Before

After

### Associated Benefits

The sites chosen were not only regular footways, but also a cycle path and remote path which ran through a popular park.

Colas were able to provide the specialist machinery required to access these difficult areas, and use our expertise to devise ways of minimising disruption to the public.

The programme was finished within the predicted timescales, within the budget, and to the high standard that can be expected from Colas.

- > Ringway Infrastructure Ltd, working for Worcestershire CC
- > 26,000m<sup>2</sup> of pathway resurfaced
- > 23 sites
- > 11 weeks
- > Environmentally friendly
- > Minimal disruption to the public
- > Quick to apply
- > Cost effective
- > Regulates effectively
- > High output rate
