

Environmental & Energy Policy

Effective management of environmental issues remains central to the delivery of our corporate strategy and, as a responsible organisation, we are committed to achieving the highest standards of environmental sustainability and legislative compliance to reduce our environmental impact, prevent pollution and reduce our energy consumption.

We deliver this through:

- Ensuring the effective implementation of our ISO 14001 certified Environmental Management System (EMS) and our ISO 50001 Energy Management System (EnMS) in areas of significant energy use including Warrington, Carnsew and Rowfant.
- Assessing activities, products and services to identify environmental aspects and apply control measures to minimise impact on the environment, reduce energy consumption and prevent pollution by working to protect and where possible enhance, natural habitats and biodiversity.
- Identifying our compliance obligations and understand the relevance to ensure we meet those requirements by working proactively with regulators and stakeholders to build effective open relationships.
- Following the principles of the waste hierarchy to ensure we use resources wisely to reduce waste and minimise disposal to landfill and encouraging a circular approach to material management.
- Reducing greenhouse gas emissions through setting objectives and targets; having systems, information and resources to be a catalyst for the effective management of fuel and energy use; utilising technology to improving efficiency and alternative energy sources where viable to reduce demand on finite resources.
- Procurement and design activities which will take account of energy efficiency and environmental impact wherever possible.
- Training our people to ensure their awareness of environmental and energy issues as well as developing their ability to contribute to our environmental and energy objectives and to achieve our targets.
- Working with our suppliers and subcontractors to ensure our values, ethics and culture are upheld throughout the supply chain and to manage the whole-life impact of our operations.
- Innovation by combining the strength of our own expertise and the extensive research facilities of the International Colas Group to develop pioneering, sustainable products and services for our customers.

We have a responsibility to all our stakeholders to minimise the environmental impact of our operations and a passion to develop sustainable solutions to protect our future, adapting the way we work to deal with the challenges ahead and the risks and opportunities these present. This policy provides the framework for our environmental and energy targets which we shall monitor performance ensuring we go further to deliver continual improvement for the benefit of Colas, our stakeholders and the environment, for both the present and the future. This policy will be communicated throughout the organization including subsidiaries: Colas Isle of Man, Colas SIAC projects and Allied Infrastructure and is readily available to interested parties on request and will be kept as documented information.
